CORK TREE

Cork is the bark of the cork oak – Quercus suber L – a noble tree with very special characteristics, growing in Mediterranean regions, most particularly, in Portugal, covering an area of approximately 720 thousand hectares of cork forests. A tree can live in average 150 to 200 years, despite its bark being stripped at nine year cycles it has an enormous capacity for regeneration.

Cork has unique qualities – very light, impermeable to liquids and gases, elastic and compressible, excellent isolator, both thermal and acoustic, slow burning.

Above all, it is a material absolutely natural and recyclable. The cork forest provides an ecosystem that makes the natural habitat for indigenous mammals and birds in risk of extinction – Iberian Lynx and Imperial Eagle.

The life cycle of cork as a raw material starts with the extraction of the bark, the so-called harvest, which is carried out from end-May to the end-August. The first stripping produces virgin cork which is used for other applications than cork stoppers – flooring, insulation, decoration, aquarium, terrarium etc – since its quality is not good enough to manufacture stoppers.

Nine years later, the harvest produces material with a regular structure, suitable for cork stoppers – the normal and usual corkwood. After the harvest, the cork planks are stacked in piles either in the forest or in yards at a factory.

After seasoning, corkwood is boiled to remove organic solids lodged in the lenticels/pores. Planks are then stabilized, selected by quality/thickness and conveyed for the right usage:

- Wine stoppers – the top grades, proper thickness.
- Cork discs – champagne and technical stoppers.
- Natural blocks – flooring, decorative, shoe.
- Cork paper and cork textile.

The planks with faults are eliminated for granulation together with the wastes remaining from the stoppers punching machines. We then get the cork granules, the raw material for the production of agglomerated cork: blocks, sheets and rolls.

WINE & CORK

There is something unique and special about the combination of Wine and Cork. It is the perfect pairing that takes you to celebrate the occasion and make it last forever.

Cork gifts, each item have their own natural and beautiful presentation,... ideal for wine lovers.

pOTS & pETS

Cork tubes, branches and cork sheets are a great natural decoration creating climbing areas and natural looking hide outs for reptiles, amphibians and other exotic pets. Hollow cork bark tubes can also be used in hanging gardens and are a delight for orchids growers.

The natural rough cork sheets are fantastic for background walls in any terrarium and vivarium.

CORK & CORK

The cork stopper is the most popular product of the cork industry, thanks to the growing investment in research and development, customers are offered a wide range of closures, in countless sizes and formats, in order to adapt to the wide variety of bottles, jars & food containers.

With the increase in technological developments, the use of cork and its derivatives outside the stopper industry has grown almost exponentially, in an infinity of other applications such as fishing, furniture, footwear, sports & gift items.
