

Dekwall

Fascinating walls
with the comfort of cork

Nature around you

Cork is a natural material that comes from the bark of the cork oak tree, with unique and incomparable qualities that no ingenious human has yet managed to copy or improve. Its cell structure resembles a honeycomb, enabling it to act as a natural thermal and sound insulator and also providing shock absorbing properties.

These exclusive qualities of cork make it ideal to use in flooring, as it grants an exceptional comfort while also being a renewable and sustainable resource.

Over the years, Wicanders has developed floor and wall coverings with exclusive properties due to its innovative Corktech technology.

By using a unique engineered multilayer structure, which combines state of the art technology with the exclusive natural properties of cork, a higher standard in wall coverings was achieved, providing the perfect match between beauty, comfort and durability.

The uniqueness of **Dekwall** wall coverings was achieved by integrating two cork layers with different purposes. The thicker layer is made with agglomerated cork and is used as a backing, providing superior comfort, noise reduction and warmth. The decorative veneer is a thin sheet of cork, created by combining various shapes of natural cork, achieving genuine and authentic visuals full of personality. For increased protection, the visual is coated with a waxed or varnished finishing.

Agglomerated cork
Sound reduction,
warmth & comfort

More than just beautiful wall coverings

More **silence**

Cork's natural properties make it an excellent sound absorber. Cork wall coverings reduce noise transmission between and within rooms, creating a quieter and peaceful environment.

More **warmth**

The unique thermal insulation features of cork provide an optimal temperature all year round, assuring a more warm and comfortable ambiance with energy cost savings.

More **durability**

Cork cells are crush resistant and will bounce back from hard impacts. These properties create a very durable product, preserving a perfect look for years to come.

More **sustainability**

The cork oak is never damaged by the harvesting, making cork ideal in terms of the ever increasing demand for conservation of natural resources.

Unique **designs**

Perfection and harmony can only be found in nature. The cork fascinating and distinct natural shapes give a special touch to interior wall decoration, creating unique spaces full of style and charm.

Alabaster

Cosy elegance

This graceful visual with rich cork textures is perfect to create elegant and delightful ambiances. Alabaster collection blends the desire of well-being with contemporary beauty.

Alabaster Chalk

RY11001 - 600 x 300 x 3,0mm
Finishing: Wax

Piel Aqua
RY11001 - 600 x 300 x 3,0mm
Finishing: Wax

Think green **choose** Wicanders®

Wicanders® is a truly sustainable brand! Produced by Amorim, it represents a unique balance between the creation of wealth and the protection of the environment. The starting point is a raw material that is extracted cyclically from the cork oak trees without ever damaging them. This raw material is then transformed into high value-added products while promoting the economic and social sustainability of areas at risk of desertification.

Several eco-efficiency studies, based on a comparative analysis with several other types of flooring, illustrate the excellent environmental performance of Wicanders® products and its manufacturing process. Besides the smaller amounts of energy and raw materials required for the manufacturing process, these products actively contribute to reducing global warming, not only through their low emissions, but also due to cork's natural property of retaining CO₂.

It is estimated that the Portuguese cork oak forest – montado – is responsible for retaining 5% of the country's annual CO₂ emission, representing 4.8 million tons per year.

As of January 2012, France has adopted regulations that limit total VOC emissions of building products. Manufacturers, selling their products in France must obtain a classification ranging from A+ (very low emissions) to C (high emissions). The declared goal is to improve indoor air quality in private/ commercial buildings.

The importance of Cork Oak

The Cork Oak (*Quercus Suber L.*) is a tree belonging to the Oak family from which Cork is extracted. Its value is based not only on the products extracted from the tree, but on all of the agricultural, forest, pastoral and hunting activities that revolve around the cultivation of the Cork Oak.

Regular extraction of the Cork (a process called stripping) is a fundamental contribution for environmental, economic and social sustainability in the rural areas of the Mediterranean region where the Cork Oak may be found.

The Cork tree is a slow growing tree, which may live for 200 years, which allows it, on average, to be stripped 16 times during its lifetime. The first extraction of cork from the Cork Oak tree occurs only 25 years after planting, following which it is harvested in 9 year cycles, without ever damaging the tree in any way. This method allows the cork oak forest to fulfill its role of fixing CO₂, thus actively contributing to reduce global warming.

The Cork forest in Portugal (700.000 hectares), known as "Montado", is a typical Iberian Landscape which is key in supporting a natural bio-diversity, including some of the most endangered species in the world: Iberian Lynxes, Imperial Eagles', Black Storks, Wolves and Wild Bears.
